

Dictation Contest (PRJr, 初級) No. 113

Hello, everyone!

I hope you've started writing.

Floppy wanted a new basket. Mum and Biff went to the market. They got a new basket. Mum and Biff went to the toilet. Floppy saw a cat. He chased it. The cat jumped over the oranges. Crash went the oranges. The cat jumped over some plates. Crash went the plates. Everyone was cross. "What a bad dog," everyone said. "What a good dog," said Mum.

Okay, guys, see you soon!

Dictation Contest (PR1, 中級) No. 113

Hey, guys! How's it going?

Last time it seemed like Luke got into a little bit of trouble, so let's see what the other guys are doing...

Not far from the base, Han Solo and Chewbacca spot an Imperial probe droid hunting for the rebels. BOOM! Han shoots the droid with his blaster. The droid is destroyed but Han knows it has signaled the Empire with the location of their hideout.

Oh, no. So, now, the Empire probably knows where they are. They'll probably have to leave that base and find somewhere else to hide. Let's see what happens, okay? See you, guys!

Dictation Contest (PR2 上級) No. 113

Hey, guys! How are you doing?

Hope you're all still staying safe and still practicing proper social distancing whenever you can. And I hope you're enjoying the last few days of summer, before the weather starts to get more extreme. Speaking of extreme weather, take a listen to this fairly concerning story:

Greenland's ice sheet lost a record amount of mass last year, according to a study published on August 20th, a finding that could prompt scientists to redefine their worst-case scenario as they assess the effects of climate change. Last year, as warm air flowed northward from lower latitudes, the frozen island experienced a record loss in its ice mass, geoscientist and glaciologist Ingo Sasgen of the Alfred Wegener Institute in Germany said. That loss of 532 gigatons of ice was 15% more than the previous record in 2012. Greenland's ice melt is of particular concern, as the ancient ice sheet holds enough water to raise sea levels by at least six meters if it were to melt away entirely.

Oh, see, there you go! Even with the coronavirus pandemic still raging, climate change is the biggest threat to human survival. So, tell your friends and family to reduce their plastic consumption as much as possible, okay?

Alright, guys, as always – study hard, stay safe, and I'll see you soon.
