

Dictation Contest (PRJr, 初級) No. 23

- Tim:** It's such a lovely day.
Bina: Yeah, it's nice and sunny. It's windy, too!
Tim: Yeah! It's so windy! I almost blew away!
Bina: What do you mean?
Tim: I mean, I almost flew up into the sky!
Bina: Really?
Tim: No, not really. I just mean the wind was very strong.
Bina: Ah, I see.

Dictation Contest (PR1, 中級) No. 23

- Tim:** It's such a lovely day, isn't it?
Bina: Yeah, it's nice and sunny. It's also pretty windy.
Tim: Yeah, right! It's so windy, I almost blew away!
Bina: Yeah, right...
Tim: Hm?
Bina: I mean, not literally, though, right?
Tim: No, not literally. I just mean the wind was very strong.
Bina: Not *that* strong...
Tim: What do you mean?
Bina: I mean, if you were a light person, then maybe. But it would take a tornado to pick *you* up into the sky, buddy.
Tim: What are you trying to say?
Bina: I'm just saying that heavy objects are harder to get carried away by strong wind. So you'd be safe.
Tim: Oh, I've had enough of this!
Bina: What did I say?

Dictation Contest (PR2 上級) No. 23

A team of paleontologists has uncovered what they believe was the most dangerous place in the history of the Earth. The team of fossil hunters said an area near the Morocco-Algeria border was home to a terrifying array of ferocious predators – rather like the beasts from Jurassic Park, but on steroids. The paleontologists have dubbed the area as being the “most dangerous place in the history of planet Earth”. Their claim is based on the discovery of an array of fossils found in ancient rock formations called the Kem Kem group deep in the Sahara.
