

Dictation Contest (PRJr 初級) No. 54

Hello everyone. My name is Bina and today we will read Doraemon. Are you ready?

Why is everyone mad at me? I can't stand it anymore.

Take Giant for example. He's the bad one.

That's not always the case.

It's because you do things that make people mad at you.

That's true, but still...

Good job everybody. See you next time.

Dictation Contest (PR1 中級) No. 54

Hi everyone. How are we doing? This is another PR 1 dictation video and today we will use the Eiken pre level 2 textbook

A kind of whale called a narwhal lives in very cold oceans. Most male narwhals have a long teeth that comes out of their mouths. The tooth can be over two meters long. Some scientists think narwhals use this tooth to check the temperature. Others say narwhals use it to help them find food. Scientists hope to learn more about narwhals.

Ok. Take care guys. I'll see you in the next video.

Dictation Contest (PR2 上級) No. 54

Hello everyone. I'm Bina and for today's PR2 dictation contest we are going to be reading something from the center exam. Are you ready?

When flying across the United States you may see giant arrows made of concrete on the ground. Although nowadays these arrows are basically places of curiosity, in the past, pilots absolutely needed them when flying from one side of the country to the other. The arrows were seen as being so successful that some people even suggested floating arrows on the Atlantic ocean. Pilots used the arrows as guides on the flights between New York and San Francisco. Every 16 kilometers, pilots would pass a 21-meter long arrow that was painted bright yellow. A rotating light in the middle and one light at each end made the arrow visible at night. Since the 1940's other navigation methods have been introduced and the arrows are generally not used today. Pilots flying through mountainous areas in Montana, however, do still rely on some of them.

Good job everybody. See you next time.
