

**Dictation Contest (PRJr, 初級) No. 567**

Hello! Welcome back to PR Junior! Let's take a listen to a conversation at a flower shop:

I need some flowers for my father. It's Father's Day!

Very well. We have some fresh yellow roses.

How much are the roses?

Twenty dollars per dozen.

That sounds like a good deal!

Yes, they are on sale today.

I'll take a dozen.

Fantastic! Will there be anything else?

No, the roses will be fine.

I'm sure your father will love them!

Thank you!

That's all for today! See you!

**Dictation Contest (PR 1, 中級) No. 567**

Hello. Welcome back to PR1! Today's movie is about snow! Let's get started!

Some cold places have snow in the winter time. Snow is like frozen rain. It comes down from the clouds in white snowflakes. It is soft and beautiful. Snow is very, very cold. People have to wear warm clothes when they go out in the snow. Polar bears live in the snow and ice. Their fur keeps them warm. It is like our warm clothes. Children love to play in snow. They can build a snowman and make some snowballs to throw.

So, do you like the snow? When it snows, do you do any fun things? Let me know in class!

See you in the next movie! Bye-bye!

Dictation Contest (PR2 上級) No. 567

Hey, guys! How are you doing?

Hope you're all still staying healthy and safe.

I have another news story here yet again relating to the prehistoric natural world, and more specifically about the discovery of fossils, but this time not in a place that you might think. Take a listen to this:

More than 70 shells embedded in a footpath outside a Bangkok shopping mall have been found to be the fossils of marine creatures that lived over 66 million years ago, Thai experts have confirmed. An eagle-eyed shopper first spotted the snail-shaped fossils measuring up to 12 centimeters across dotted along the 400-meter stretch of pavement by the Siam Square shopping center. Paleontologists from the Ministry of Natural Resources and Environment investigated and found 77 ammonite fossils. Ammonites are marine creatures believed to have died out 66 million years ago.

Ah, well that's a pretty cool find, isn't it? I once went to a big shopping mall in Bangkok – twice, actually – and though I saw lots of cool things both inside and around that building, I don't remember seeing any ammonites.

Alright, guys, well, until next time – and as always – study hard, stay safe, and I'll see you soon.
