

Dictation Contest (PRJr, 初級) No. 757

Hello! Welcome back to PR Junior.

Today I will read the last part of the story of the lion and the mouse. Let's start!

Sometime later, a few hunters captured the lion, and tied him to a tree. Just then the little mouse happened to pass by, he ran up to him and pulled away the ropes that bound him, the king of the jungle. "Was I not right?" said the little mouse, very happy to help the lion.

That was all of the lion and the mouse. How was it? See you next time!

Dictation Contest (PR 1, 中級) No. 757

Hey guys, how's it going?

Where are you listening to this right now? Probably at home, right? Of course, as I am recording this video, I am at Inter TOMAS. But, by the time you watch this, I will be in England. Yes, I'm going back home for the first time in over 3 years. That is definitely the longest time I have been away without visiting. So, of course, I am very excited to see my family and friends. People asked me what I'm going to do while at home, but honestly, I'm probably just going to do nothing. I plan to just watch TV, eat snacks and enjoy the lovely British weather.

So see you when I get back.

Dictation Contest (PR2 上級) No. 757

Hi, welcome back to PR2!

It's finally becoming warmer, isn't it? I'm so glad spring is here! Let's talk about the top four longest rivers in the world today.

The four longest rivers in the world are located in four different continents. That at least is undisputed. However, while most scientists agree on the order, it is difficult to accurately measure the length of such enormous rivers and there is also sometimes disagreement on where a river actually starts and finishes. The Nile, beginning at Lake Victoria, is Africa's longest river, negotiating its 6,650-kilometre journey to the Mediterranean Sea through the land which has been used continuously for over 6,000 years.

The Amazon in South America is the largest but not the longest river, starting high in the Peruvian Andes and flowing for much of its 6,400-kilometre length parallel to and not far from the Equator, eventually emptying into the Atlantic Ocean.

The Yangtze, with its source in the Kunlun Mountains of Tibet, is China's most important internal waterway and travels 6,300-kilometres to the Yellow Sea.

The fourth longest river of the world is the Mississippi-Missouri, the source of which was not discovered until 1832 when it was traced to Lake Itasca in Minnesota. It deposits rich silt in the delta where it ends its 6,275-kilometre journey and flows into the Gulf of Mexico.

Well, so those are the four longest rivers on Earth! Have you ever heard of any of them before? Let me know your thoughts next time! Bye!
