

Dictation Contest (PRJr, 初級) No. 856

Hello, everyone! Welcome back to PR Junior.

Today, let's talk about farts!

When you eat or drink, you swallow air. And if you eat or drink in a big hurry, you swallow a whole lot of air.

The air that escapes through your mouth becomes a burp. When it comes out the hole in your bottom, it's a fart – also called passing gas.

Alright, do you know what a fart is now? That's all for today. See you next time!

Dictation Contest (PR 1, 中級) No. 856

Hi, everyone! This is PR1.

It is another boiling summer day today, and I have been seeing many people using portable fans. While they are believed to help cool us down, there are several health risks, so let's learn about them together!

First, human beings have a natural method to cool down: sweat! When the sweat evaporates, or dries, it also removes some heat. When we use fans to dry our sweat, not much heat is removed, making us even hotter. Also, fans blow hot air, so it could add more heat to our bodies. To prevent this, try using a wet towel around your neck and some mist before using the fans.

Also, to prevent dry eyes, avoid using the fan close to your face.

All right, that is all for today – stay safe and see you again!

Dictation Contest (PR2 上級) No. 856

Hello, everyone! Welcome back to PR2!

This is the second half of the text about a company called BioTech. Last time we stopped right when Jordan was about to give his speech. Let's see what happened next!

He said, "My fellow coworkers, I know you have all seen the evil things our company is doing. I have a notion that we can fix them if we form a coalition. We can go to the administration and tell them we'll quit if they don't eliminate the problems. They'll have no choice but to listen to us."

Jordan explained what they were to do. His coworkers liked his explicit plan. They went in to the administrative offices and demanded that BioTech stop damaging the environment, or they all would quit. One supervisor said to them, "Thank you for being straightforward about this issue. Since I can't afford to lose all of you workers, I guess we'll just have to fix things."

Jordan, his supervisor, and his coworkers spent the next month designing a new framework for the company. They cleaned up the acid from the river and minimized the amount of air pollution the company released. At last, the company motto became apt.

That was all for this text! Let me know your thoughts during our next class! See you then! Bye-bye!
