Dictation Contest (PRJr, 初級) No. 902

Hi, welcome back to PR Junior.

Today, we're going to hear a conversation about fishing. Take a listen.

Boy: Justin gave me a book about fishing, Dad.

Father: That's interesting! Did you like it?

Boy: Yes! In fact, I want to go fishing right away.

Father: Well, it's raining today... How about going next Monday?

Boy: That's a great idea, Dad! I can't wait for it!

Father: Well, let's look at some details just to get ready, then.

That's all for today. Hope to see you soon. Bye!

Dictation Contest (PR 1, 中級) No. 902

Hi, everyone! Welcome to PR1. Today we'll be talking about a trip the author took to Sweden. Let's begin.

My family has arranged a trip to Sweden this summer. My parents want to experience the northern climate where it is bright and sunny all day long. We will hire a boat and sail to a nearby island. My parents have made a reservation to stay at a castle on the island, where we will be guests of a local family. I think staying with a family is more comfortable than going on a holiday tour like a typical tourist. Anyway, I've never been to Sweden. I've never seen the Atlantic Ocean before either; I think it will turn out to be a wonderful vacation.

Wow, Sweden! Sounds fun, doesn't it? Would you ever want to visit Sweden? Why or why not? Think about it for a while. Bye!

Hi, guys! Welcome back to PR2.

In the last video we talked about how AI works. In this chapter, I would like to introduce ChatGPT, which is a chatbot developed by a company called openAI that many people say it is a game-changing technology in [the] AI world.

ChatGPT is an AI chatbot that uses natural language processing to create humanlike conversational dialogue. The language model can respond to questions and compose various written content, including articles, social media posts, essays, code, and emails. ChatGPT is similar to the automated chat services found on customer service websites, as people can ask it questions or request clarification to ChatGPT's replies. The GPT stands for "Generative Pre-trained Transformer," which refers to how ChatGPT processes requests and formulates responses. The special thing about this software is that it sounds so human. The reason is that the latest chatbots use a type of machine learning model called a neural network. Inspired by the structure of the human brain, it's designed to learn increasingly complex patterns to come up with predictions and recommendations. With chatbots, the model learns language from a large amount of existing and new data, making it really good at sounding [like] how a person might talk. Moreover, to keep training the chatbot, users can upvote or downvote its response by clicking on thumbs-up or thumbs-down icons beside the answer. Users can also provide additional written feedback to improve and fine-tune future dialogue.

I hope you enjoyed today's video. Good-bye!
